

Job Title: Software Engineer Intern (Real-Time AI Voice Systems)

Company: dBee

Website: <https://dbee.live>

Location: Remote / Hybrid

Experience Required: 6 months – 1 year (Internship / Junior Level)

Duration: 1 - 3 Months (Pre-placement Opportunity)

Department: Platform Engineering

About dBee

dBee Live builds real-time AI voice infrastructure and products enabling interactive voice experiences at scale. Our platform powers voice-based agents, integrating speech-to-text (STT), language models (SLMs/LLMs), text-to-speech (TTS), and SIP/WebRTC-based media routing — delivering reliable, low-latency calls with high concurrency. As part of our engineering team, you'll contribute to building and scaling the core infrastructure that supports these capabilities.

Role Overview

As a Software Engineer Intern, you will work with senior engineers across Golang, Python, and infrastructure to develop and maintain backend systems for real-time voice AI. You will help build scalable, high-concurrency pipelines, integrate speech and language model services, and contribute to our telephony and media routing infrastructure. This role offers hands-on learning in distributed systems, real-time communication, and small-language-model integration.

Responsibilities

- Assist in development of backend services using Go and Python
- Build and maintain real-time voice communication pipelines (STT → Model → TTS → media)
- Integrate Speech-to-Text, Language Models / SLMs, and Text-to-Speech services
- Participate in SIP/WebRTC media routing and call orchestration design
- Work on performance optimization: CPU, memory usage, latency under load
- Deploy and monitor microservices in Kubernetes or similar container environments
- Collaborate on experiments involving Small Language Models (SLMs), embeddings, or fine-tuned voice agents
- Debug production incidents and contribute to reliability improvements alongside senior engineers

Required Skills

- Prior experience or familiarity with Golang and/or Python, academic or internship projects are fine
- Understanding of concurrency fundamentals (threads, async I/O, goroutines)
- Knowledge of backend fundamentals: REST APIs, WebSockets, basic networking
- Familiarity with databases (e.g. Redis, MongoDB, PostgreSQL)
- Comfortable working in Linux, with Docker, Git, and CLI workflows
- Strong problem-solving skills and willingness to learn

Nice-to-Have (Learning-Oriented)

- Exposure or interest in SIP, WebRTC, or other real-time media communication systems
- Familiarity with container orchestration / cloud deployment (Kubernetes, AWS/GCP/Azure)
- Interest in working with LLMs/SLMs, embeddings, voice-AI pipelines
- Exposure to message queues or asynchronous job systems (Redis Queue, BullMQ, Kafka, RabbitMQ etc.)
- Eagerness to learn model fine-tuning workflows and real-time streaming AI

What You'll Learn & Gain

- Hands-on experience in building large-scale, real-time voice-AI platforms
- Understanding of concurrency, asynchronous patterns, and performance optimization in production systems
- Exposure to integrating AI (speech + LLM) with telephony and streaming media
- Experience with microservices, containerization, orchestration, and deployment workflows
- Mentorship under experienced engineers; opportunity for pre-placement to full-time role based on performance

Why Join dBee

- Direct involvement in cutting-edge real-time AI voice product development
- Valuable exposure to both backend engineering (Go/Python) and AI model integration
- Opportunity to build impactful systems used at scale, not just prototypes
- Mentorship-driven environment, working closely with experienced engineers
- Pathway to full-time engineering role after internship period
